the Vitallium®

McLaughlin
Inter trochanteric
Appliance

A NEW IDEA IN TREATING TROCHANTERIC FRACTURES.

EASIER INSERTION
Incorporates the advantages of nail-plate combination. Permits wider selection of nail lengths.

ADJUSTABLE
Angular relation of the femoral neck and head to the femoral shaft is readily fixed in most desirable position. 13 three-degree steps are provided between 113 degrees and 158 degrees.

POSITIVE LOCK
An improved feature over prior designs of this appliance. The nail is gripped securely by the plate teeth and the set screw. The locking collar engages in keyed slots. The set screw shaft is squeezed by the locking collar. These features prevent loosening of the screw or collapse of the angle.

This improved and strengthened Vitallium appliance has been devised for intertrochanteric and subtrochanteric fractures and for high femoral osteotomies.

Regular Vitallium hip nails are used with the McLaughlin appliance. The many surgeons who prefer a nail-plate combination can now standardize on Vitallium appliances for all hip fractures—enjoy the inestimable advantage of using the single metal, the cobalt-chromium alloy of which Vitallium appliances are made, which is inert, completely compatible with bone and tissue and causes no bone necrosis.

Vitallium appliances are made by the Austenal-devised Microcast Process, and can be readily identified by their characteristic "satin" finish.

some other Vitallium appliances—
Hip Nails • Bone Plates and Screws • Spinal Fusion Plates • Fracture Nails • Bile Duct Tubes • Blood Vessel Tubes • Skull Plates

Send for descriptive leaflet No. VS224, giving full details of the McLaughlin appliance.

LONDON SPLINT COMPANY Ltd.
69 WEYMOUTH STREET, LONDON, W.1
A normal life—
even for the cerebral palsy victim

Due to the "tele-scoping" of her body this cerebral palsy patient spent almost 24 years of her life on crutches. Excessive fatigue made physical activity difficult.

In 1946 she was referred to an Orthopaedic Consultant who prescribed a Spencer Support. Spencer Designers then created a support for her based on 35 measurements and descriptions of her body as the Orthopaedic Consultant wanted it controlled. The result was a support that adequately stabilized the pelvis and supported the weak back and abdominal muscles to prevent "telescoping." Fatigue symptoms were relieved and her sense of well-being increased.

A recent letter relates that she now has a full-time job, is completely self-supporting—and is even learning to swim with the aid of a Spencer worn under her swimming suit! For men, women and children, for conditions of abdomen, back or breasts, Spencer Supports are therapeutically effective because each is individually designed, cut, and made to meet the medical indications of the individual patient.

For further information write to:

SPENCER (BANBURY) LTD.
Consultant Manufacturers of Surgical and Orthopaedic Supports
SPENCER HOUSE BANBURY OXFORDSHIRE
Telephone 2265

Spencer copyright designs are original and distinctive and for more than 20 years have been recognised by the Medical Profession as a symbol of effective control for abdomen, back or breasts.

BEWARE OF IMITATIONS. Spencer (Banbury) Ltd. regret the necessity of issuing warning to beware of copies and imitations. Look for the SPENCER LABEL stitched in the Spencer Support and ensure that it is a genuine Spencer Support and not a so-called copy.

Appliances supplied under the National Health Service
Trained fitters available throughout the Kingdom

A GUIDE FOR NATURE'S REPAIR OF FRACTURED BONES

EGGERS TYPE

VITALLIUM

Encourages earlier bony union . . . assures optimum placement of screws . . . provides fully adequate fracture support.

Vitallium Internal Contact Splints are slotted bone plates—permitting fractured bone ends to move together and to be in constant contact under muscular pressure when necrosis and absorption of the traumatized bone ends occur. They keep the fractured bone in longitudinal alignment and provide lateral stability. Fragments are locked securely, and rotation is hindered by the combination of longitudinal muscular pull and screw fixation. The Eggers splints thus serve as guides for nature's repair of fractured bones. Under the influence of splinting, compression, and contact, mechanical and physiological conditions favorable to early bony union are created.

The slots in the plates facilitate placing the screws in the most desirable locations — as far from the fracture site as possible. Loose bone fragments may be engaged firmly with additional screws.

Available in lengths of 3", 4", 5" and 6" with Eggers type screws.

Also at Buenos Aires, Johannesburg, Sydney, Melbourne, Calcutta, Durban, etc.

★ Patented in England and thirteen foreign countries. Sold the world over.

They always make me welcome

And why not? We do not regard an account as being of small consequence simply because it is small. On the contrary, we believe that the importance of any banking transaction lies in its importance to the customer. We try to meet our customers’ requirements in that spirit and to give the same welcome and the same friendly attention to all of them, whatever the size of their accounts. If you would like to know more about the personal quality of Westminster Bank service, the Manager of your local branch will be glad to tell you.

WESTMINSTER BANK LIMITED
Putting it plainly

The carefully balanced characteristics of ILFORD X-ray films enable them to reproduce important detail clearly over the whole range of subject opacities. There are three types of ILFORD X-ray film in general use for medical radiography: Standard, Red Seal and Ilfex. Each type has certain special properties but high quality, perfect uniformity and freedom from fog are common to all.

* ILFORD STANDARD X-RAY FILM for most of the routine work of the X-ray Department.

* ILFORD RED SEAL X-RAY FILM for all occasions where extreme speed is needed.

* ILFORD ILFEX X-RAY FILM for maximum resolution of fine detail.

* The Department of Radiography and Medical Photography of Ilford Limited, Tavistock House, Tavistock Square, London, W.C.1 (EUSTon 2251), will always welcome the opportunity of helping with information or advice.
A booklet to read before you appoint your Executor

The Manager of any branch of Lloyds Bank will be pleased to let you have a copy of this booklet, which provides useful information about the Bank's executor and trustee services.

LLOYDS BANK LIMITED

For certain cases of weak (valgus) feet

Clarks curator heel for children means "ordinary shoes"

Certain foot ailments and leg weaknesses can be put right without T-irons or surgical boots. Wherever possible doctors use a light-weight corrective heel, knowing the immense difference such an "ordinary look" makes to a child's attitude towards its own physical handicaps. Full details of Clarks Curator Heel are available to the medical profession, children's clinics, etc., on application to Clarks.

BUTTERWORTH & CO. (Publishers) LTD.
The strength of a chain is in its weakest link. In the chain of human endeavour supporting the surgeon's skill, there can be no weakness... 

the catgut he uses must present no hazards for the knot to find. The surgeon's confidence demands uniformity of gauge throughout the suture length. Nowhere is surgical trust better placed than in the suture processed by modern scientific methods keyed specially to provide uniformity of gauge.

UNIFORMITY—THE SURGEON'S SECURITY AGAINST THE INQUISITIVE KNOT

ETHICON SUTURE LABORATORIES LIMITED, BANKHEAD AVENUE, EDINBURGH
A TREMENDOUS ADVANCE IN CRUTCH DESIGN

Telescopic Tubes with spring-loaded plungers (having independent springs for complete safety) make Crutch adjustable in length for people of all heights. Hinged Forearm Rest supports arm, leaving hand free for opening doors, etc. This Forearm Rest will lock in horizontal position, enabling body to be completely relaxed. (See illustration on right.) Locking plunger automatically released by lifting Crutch. Exact fitting of the two tubes gives absolute rigidity and freedom from noise. Bottom of tube specially rounded to form cushion inside ferrule, ensuring non-slip surface and reducing wear inside rubber ferrule. Thick, soft, rubber grips give maximum comfort and minimum shock load to body.

Made of high tensile light alloy metal, polished, non-corrosive and vermin-proof. Forearm Clip made of heat-treated spring steel covered with celluloid to avoid damage to clothes or skin.

Light, compact and portable. Easily packed in small suitcase. Easily stored. Weight only 1 lb. 13 ozs.

Write for Literature

WALKING STICK

Similar in design and construction to Crutch, and embodying same principles. Weight only 1 lb. 5½ ozs.

A NEW PLASTER BOOT
(Patents pending)

The LUDUN Boot is the result of several years' research and this latest model permits an easy normal gait for those patients who have their legs in plaster.

Features:
1. Smart looking footwear — easily removable and weatherproof.
2. Good quality leather allows repeated use by many patients.
3. Lined with sorbo pads and fitted with a spring steel strip to absorb shock.
4. Radius in design of sole gives normal heel-toe action.

LUDUN Ltd. is a non-profit-making Company formed to employ severely disabled people and help them through gainful occupation to restore confidence in themselves as useful citizens.

Address inquiries to:
LUDUN Ltd., 22 Lewsey Road, Luton, Bedfordshire, England

XX
The NEW IMPROVED "SHROPSHIRE" ORTHOPÆDIC HORSE

DESIGNED to give the greatest accessibility to the surgeon for the reduction of fractures, their control by X-rays, and for their immobilisation, the New Improved Shropshire Orthopaedic Horse enables a greater variety of procedures to be carried out with much greater ease than is permitted by any other apparatus for a like purpose.

A perfect Appliance for its purpose:

SALTS' SACRO-ILIAC BELT

Designed by an eminent orthopaedic specialist, this Belt is available in styles for ladies and gentlemen. Its perfect efficiency is accompanied with complete comfort. Rapidly restoring the normal relationship of the sacral and iliac bones, it also exerts a beneficial effect on the tone of the abdominal viscera. Not the least commendable thing about this Belt is the fact that it enables the patient to make early resumption of normal activities. Further details and Measure/Order forms available to medical people on request.

Factory: Alton, Hants. Telephone Alton 2294
This new Desoutter electric power Tool was developed specially to make the removal of surgical plasters a fast and safe operation—safe for both patient and operator. The circular saw does not rotate, it oscillates through an arc only a few degrees wide at about 18,000 strokes per minute. This ultra rapid short stroke movement will not cut when it is in contact with mobile skin or soft material. But when up against hard materials like plaster it is an extremely efficient cutter. Please write for the leaflet which explains the method of use.
HIP ARTHROPLASTY with PROSTHETIC HEADS

TECHNIQUE of Doctors R. and J. JUDET

Reinforced Monobloc and Grooved
Drs JUDET’S MODEL is made of

1. Stainless Steel Armature of high breaking strength embedded before polymerisation. (By this process no plugs or cement are used in inserting of the armature.)
2. Grooves preventing the risk of rotation.
3. Grooves specially ended to prevent risk of extraction.

Explanatory leaflet P.67 giving full details on heads and instruments on request.

Manufactured by

DRAPIER Surgical Instruments 41 Rue de Rivoli, PARIS (10)
Problems? Here are some answers!

Comminuted intertrochanteric fractures, especially in senile patients?

No. 300—Well-Leg Splint, $35.00
This original and standard Roger Anderson well-leg splint supplies abduction, internal rotation, and fixation. Convalescence is favorable since patient is up in the wheelchair.

Where can I buy finger traps?

No. 504—Finger Traps, $2.25 each
Specify small, medium or large. These are silver-plated to permit sterilization without rusting.

How to prevent torsional strain on walking leg casts?

No. 755—Swivel Walking Button, $2.75 each
$2.50 each in lots of 12
Rubber tip replacements, $0.50
Exclusive ball and socket construction. Gives almost normal heel and toe movement in walking on any level. No metal straps to impair X-ray examination of ankle.

How to keep leg-boot looking trim?

No. 718—$6.00 complete
Here's one that's different. Slip-proof handle even when it's wet. Sharp steel blade easily adjusted to your requirement. Replaceable blade may be sharpened many times since extra cutting length is available.

How to reduce certain wrist fractures?

No. 505—Self-Equalizing Finger Traction Assembly, now only $19.50 complete
Includes pulley assembly and traction plate, sturdy counter-traction strap with buckle, and 3 silver-plated finger traps. Maintains accurate and equal traction on one, two, or three fingers at once.

How to support arm for cast application?

No. 300—Well-Leg Splint, $35.00
This original and standard Roger Anderson well-leg splint supplies abduction, internal rotation, and fixation. Convalescence is favorable since patient is up in the wheelchair.

Are cast knives all alike?

No. 505—Self-Equalizing Finger Traction Assembly, now only $19.50 complete
Includes pulley assembly and traction plate, sturdy counter-traction strap with buckle, and 3 silver-plated finger traps. Maintains accurate and equal traction on one, two, or three fingers at once.

Where can I buy finger traps?

No. 504—Finger Traps, $2.25 each
Specify small, medium or large. These are silver-plated to permit sterilization without rusting.

How to prevent torsional strain on walking leg casts?

No. 755—Swivel Walking Button, $2.75 each
$2.50 each in lots of 12
Rubber tip replacements, $0.50
Exclusive ball and socket construction. Gives almost normal heel and toe movement in walking on any level. No metal straps to impair X-ray examination of ankle.

How to keep leg-boot looking trim?

No. 718—$6.00 complete
Here's one that's different. Slip-proof handle even when it's wet. Sharp steel blade easily adjusted to your requirement. Replaceable blade may be sharpened many times since extra cutting length is available.

Surgery Section IX

CONTENTS. In this Section the whole field of Surgery is covered and includes general surgery, urological surgery, orthopaedic surgery, thoracic surgery, plastic surgery, casualty (or traumatic) surgery, surgery of the thyroid gland and surgery of children.

Selected abstracts of articles on neurological and oral surgery also appear in this section.

Abstracts of articles on pre- and post-operative care and surgical nursing are published.

The Journal of Bone and Joint Surgery, Boston:

"... The abstracts are very well done, and we should be most grateful to our Dutch friends for this important contribution."

The subscription rate is £6.48. per yearly volume of 1920 pages, including an index classified both by author and subject. Write for a prospectus or specimen copy.

xxvi
"... To study the phenomena of disease without books is to sail an uncharted sea."

WM. OSLER
"Books and Men."

"In science, read by preference the newest books; in literature, the oldest."

CAXTONIA
"Hints on Mental Culture."

★ SOME NOTABLE PUBLICATIONS ★

THE CLOSED TREATMENT OF COMMON FRACTURES
By JOHN CHARNLEY, B.Sc., M.B., F.R.C.S. Foreword by Sir HARRY PLATT. 200 pp. 133 illustrations. 35s.
"... There are other and larger books written about the treatment of fractures but none so vital as this. There is not one of the 190 pages; there is hardly a sentence; and there is not an illustration which the reader will not want to underline because of its importance, and it is suggested that these remarks apply not only to resident casualty surgeons. It is believed that every orthopaedic and traumatic surgeon in Great Britain and elsewhere will agree that this book has something to teach him." --British Journal of Surgery.

JOHN HUNTER
By S. ROODHOUSE GLOYNE, M.D. 112 pp. 12 plates. 15s.
An excellent monograph which tells the story of John Hunter in the setting of his period.

LORD LISTER: HIS LIFE AND DOCTRINE
By DOUGLAS GUTHRIE, M.D., F.R.C.S. (Edin.). 136 pp. 20 plates. 15s.
"... This book is written in a stimulating and lucid style, and gives the reader a very good mental picture of Lister's life and doctrine. It will appeal both to the undergraduate and graduate." --British Journal of Surgery.

INJURIES OF THE KNEE JOINT
"... A book which will be valuable to those with sufficient experience to enable them to peruse its pages with discernment." --British Journal of Surgery.

CLEFT PALATE AND SPEECH
"... A book that is particularly valuable in that it cements the association between surgeon and speech therapist." --Extract from Foreword by Richard Battie, M.Chir., F.R.C.S.

NON-GONOCOCCAL URETHRITIS
By A. H. HARKNESS, M.R.C.S., L.R.C.P. 436 pp. 167 illustrations. 52s. 6d.
"... From time to time it is our pleasure to review in these columns a book on some special subject which is of such merit as to constitute a landmark in our knowledge of disease and to evoke a feeling of pride that it has been written in the English language. It is certain that Harkness on non-gonococcal urethritis is worthy of a place in this select category.
"... The author's own expert opinion permeates the text and gives it the touch of greatness: we congratulate him on producing a superlative monograph and a surgical classic." --British Journal of Surgery.
