Young, J. Z. Book review, 296.
Size of nerve fibres, 455.
Young, R. H. Surgical treatment of sciatica and low back pain, 470.

Z

Zanoli, R. Vitamins and osteopathies, 472.
Zuco, C. M. See Marino-Zuco, C.
SUBJECT INDEX

A

Abernethy, John, and operative surgery, 636.
Acasis, diaphysial, 100.
Acromio-clavicular dislocation, calcification of
coraco-clavicular ligaments after, 646.
Acrylic head in hip arthroplasty, 468, 475.
prosthesis for fractures of femoral neck in old
patients, 466.
response of bone to, 468, 475.
Actinomycetes, wound infection with, 221.
Actinomycosis, bacteriology of, 224.
Actinomycosis of bone, 205.
of spine, 205.
advanced, treatment with penicillin and streptomycin, 215; (correspondence), 482.
Adams, William, biography, 124.
portrait, 125.
Adrenaline, recent work on, 134.
Adrenocorticotrophic hormone of pituitary, 465.
Africans, chronic bone infections in, 584.
Alkaptonuria, 407.
America, Latin, orthopaedic surgery in, 1900–1950,
647.
Amputation, hindquarter, 460.
Aneurysms, arterial and arterio-venous, treatment
of 140.
false, complicating lateral meniscectomy, 285, 567.
Ankle, arthrodial of, and subtalar joint, 466.
compression, 180.
of subastragaloid joint, 466, 475.
fracture-dislocations, lateral rotation, treatment
of (demonstration), 137.
region, calcinosus of, 575.
Arterial spasm, prolonged traumatic, after supra-
condylar fracture of humerus, 363.
Arthritis, alkaptonuria, 407.
experimental, avitaminosis C and, 473.
rheumatoid, manubrio-sterneal joint in, 60.
Arthrodesis, compression, of ankle and shoulder, 180.
ischio-femoral, by posterior approach, 365.
late results of, 474.
of ankle and subtalar joint, 466.
of foot, late results, 496.
of shoulder and pectoralis major transplant in
injury to upper trunk of brachial plexus, 598.
perital articular, for paralytic flail foot, 503.
Arthroplasty for persistent dislocation of hip in
adults, 283.
of femur, changes in head underlying vitallium
cap, 119.
of hip, spring exerciser for, 634.
Articulating cartilage, mechanical structure of, 251.
Association of Surgeons of East Africa, establishment
of, 645.
Atlanto-axial fracture-dislocation, 108.
joint, injuries, 434.
Austrian Orthopaedic Association refounded, 140.
Avitaminosis and osteopathy, 472.
C and experimental arthritis, 473.

B

Back pain, low, surgical treatment of, 469.
Baker's cyst coexisting with Pelligrini-Stieda's
syndrome, rheumatic fever and periartthritis of
shoulder, 646.
Bankart, A. B. Blundell, obituary, 279.
Bantu, syphillis of long bones in, 578.
Birds, egg-laying cycle in, biochemical changes
during, 643.
formation and mobilisation of medullary
bone in, 642.
Blood pressure and the suprarenal medulla, 134.
Bone, actinomycosis of, 205.
and Tooth Society, meeting on parathyroid and
bone, 289.
on tooth structure, 137.
on sex hormones and bone, 642.
bank, experiences with, 466.
homografts and, 316.
calcification of, 138.
cartilagenous defect, nomenclature of, 427.
disease, genito-urinary tuberculosis in, 462.
dystrophies, generalised, nomenclature of, 420.
effect of partial vitamin C deficiency on, 473.
of vitamins on, 472.
grafts, by-pass, in treatment of pseudarthrosis of
tibia in childhood, 36.
cancellous chip, 486.
homogenous, and the bone bank, 316.
and medullary nailing in treatment of large
defects of long bones, 476.
with refrigerated homogenous bone, 301.
growth, effect of vitamin E on, 473.
stimulation by redistribution of intra-osseous
circulation, 476.
infections, chronic, in Africans, 584.
medullary, formation and mobilisation of, ovarian
cycle and, in birds, 642.
Paget's disease of, 449.
complicated by fractures, 331.
by sarcoma, 323.
quiet necrosis of, 450.
reaction to acrylic resin, 468, 475.
refrigerated homogenous, and the bone bank,
316.
use of, 301.
sarcoma, conservative resection for, 468.
sex hormones and, 642.
stored for grafts, 138.
structure, effect of parathormone on, 290.
tuberculosis, treatment by streptomycin with
operation, 473.
tumours, giant-cell, treatment of, 476.
high acid phosphatase content, 138.
malignant, biological resection in treatment of,
476.
unusual, 460.
resection of, with replacement by metallic
prostheses, 476.
Bones, disappearing, 466.
long, defects of, developmental, 461.
large, homogenous bone graft and medullary
nailing in treatment of, 476.
syphilis of, in Bantu, 578.
movements of, mechanical structure of articulating
cartilage, 251.
" Bonesetter of Crosshall Street," 466.
Book Reviews: 472.
Archives of Middlesex Hospital, Vol. I, No. 1,
1951, 491.
Book Reviews (continued):

Arnell, S. Myelography with water-soluble contrast, 1948, 630.
Bourquin, J. B. Les malformations du nouveau-né causées par les viroses de la grossesse, 1948, 143.
Brandt, S. Wedrnig-Hoffmann’s infantile progressive muscular atrophy, 1950, 488.
Calvetti, P. Le fratture del gomito dei giovani, 1950, 652.
Colonna, P. C. Regional orthopaedic surgery, 1950, 640.
Danis, R. Théorie et pratique de l’ostéosynthèse, 1949, 144.
Essays in surgery presented to Dr W. E. Gallie, 1950, 485.
Hohmann, G. Hund und Arm, 1949, 144.
Kaufmann, R. Os et tuberculose, 1950, 298.
Lacroix, P. The organization of bones, 1951, 652.
Lauritten, G. K. Medullary nailing, 1949, 490.
Leikonen, O. Astrapalectomy as an ankle-stabilising operation in infantile paralysis sequelae, 1950, 652.
Luck, J. V. Bone and joint diseases, 1950, 295.
Macintosh, R. R. Lumbar puncture and spinal analgesia, 1951, 651.
Nicholson, G. W. de P. Studies on tumour formation, 1950, 487.
Skinhoj, E. Some problems of acute anterior polyarthritis and its sequelae, 1949, 298.
Sundt, H. Further investigations respecting malum coxae Calvé-Legg-Perthes, 1949, 489.
Brachial plexus, injury to upper trunk of, pectoralis major transplant and arthrodesis of shoulder for, 598.
British Orthopaedic Association spring meeting, 1951, 281.
Brucellosis, 465.
Burns, control of infection in, 459, exposure method of treatment, 459.
Festival meeting on, 459.
Burns, fluid replacement in, 459.
Skin grafting for, 459.
Bursa, calcinosis in, 573.
By-pass graft in treatment of pseudarthrosis of tibia in childhood, 36.

C

Calcaneum, fracture involving subtalar joint, 475.
results of reduction, 284.
treatment by early mobilisation, 140.
Calcinosi, 572.
circumscripia, 572.
localisatu, 573.
universalis, 572.
Calcium metabolism, citric acid and, 268.
Callus, hyperplastic, in osteogenesis imperfecta, 591.
Camera, Professor Ugo, presentation to, 140.
Cancer as sequel to war wounds, 167.
Capener-Neufeld nail-plate fixation of trochanteric fractures, 192.
Carpus, perilunar dislocation of (correspondence), 141.
syphilitic osteitis of, 586.
Cartilage, articulating, mechanical structure of, 251.
bone defects of, 427.
Chandler’s method of lumbo-sacral fusion, 463.
Charcot’s arthropathy of hip treated by subtrochanteric displacement osteotomy (demonstration), 136.
Ches, meningocoele, lateral, spinal deformity and multiple neurofibromatosis, 87.
Chondro-ossoeal defect, irregular familial, 429.
Citric acid and calcium metabolism, 268.
Clavicle, fractures, malunited, operative treatment of, 644.
Staphylococcal osteomyelitis of, during scarlet fever (demonstration), 136.
syphilitic osteitis of, 586.
Club foot, Kite method of treatment, 463.
relapsed, 287.
Colles’ fracture, 465.
Coraco-clavicular ligaments, calcification of, after acromio-clavicular dislocation, 646.
Cortical hyperostoses, infantile, atypical case of, 248.
Coxa vara congenita, 475.
developmental, 478.

D

Danish Organisation for Crippled Welfare, development under Paul Guildal, 467.
Orthopaedic Association, 1950 autumn meeting, 139; 1951 spring meeting, 468.
Dentine, histology of, 137.
Isolation of sulphated muco-polysaccharide from, 138.
Organic constituents of, 138.
Diaphysial aclasis, 100.
Disabled worker, rehabilitation of, 646.
Disc, intervertebral, effects of compression on, 609.
Elastic properties of, 608.
Experimental incision of, 612.
in rabbit, 612.
Lumbar, procted, etiology of, 10.
and painful backs, 8; (editorial), 3.
Clinical features, 11.
Excision of, 8, 31, 470; (editorial), 3, 4.
Results, 27.
Late, 285.
Unsatisfactory, 31.
Pathology of, 8.
Disc, intervertebral, pathological changes in, 471, 472.
physical properties of, 807.
puncture, diagnostic, 471.
Dixey, Frederick Augustus, pioneer of osteogeny, 275.
Duraiswami, P. K., awarded Ph.D. by University of
Liverpool, 642.
Dysostosis, metaphysial, case of renal rickets
simulating, 231.
Dysplasia epiphysialis multiplex, 461.
punctata, 461.

E
East Africa, Association of Surgeons of, establish-
ment of, 645.
East Anglian Orthopaedic Club meetings, 136, 465.
Egg-laying cycle in birds, biochemical changes
during, 643.
formation and mobilisation of medullary
dense in, 642.
Enamel, histological investigations on, 137.
X-ray analysis of, 137.
End-plate, motor, response to nerve impulse, 455.
Engelmann’s disease, 461.
Enzyme at endings of post-ganglionic sympathetic
nerves, 455.
Epiphyses, dysplasia epiphysialis multiplex, 461.
punctata, 461.
stippled, 461.
Epiphysial arrest, problem of, 462.
Epiphysitis, syphilitic, 585.
Essex-Lopresti, Peter Gordon, obituary, 453.
Evans, E. S., made C.B.E., 454.

F
Face, burned, reconstruction of, 456.
Femur, arthroplasty of, changes in head underly-
ing vitallium cup, 119.
avascular necrosis of head of, bilateral, 464.
bone supply to head of, use of Geiger counter in
estimation, 475.
calcinosis in region of greater trochanter, 577.
coxa vara congenita, 479.
developmental, 478.
fractures of neck, in old patients, acrylic prosthesis
for, 466.
spontaneous (demonstration), 138.
of shaft of, pathological (demonstration), 136.
relationship to Volkman’s ischaemic contrac-
ture, 336.
trochanteric, treatment, 508.
by low-nail method of internal fixation, 513.
by nail-plate fixation, 192.
head of, changes in, underlying vitallium cup, 119.
McMurray osteotomy, internal fixation after, 644.
with trifin nail, 418.
osteogenic sarcoma of distal end, conservative
resection for, 468.
rotation osteotomy of, and congenital dislocation
of hip, 474.
slipping epiphysis of, 475.
syphilitic osteitis of, 587.
Festival symposia, 454.
Fibula, cyst of (demonstration), 136.
impaired growth after osteomyelitis, 136.
Finger, calcinosis of, 575.
divided flexor tendons of, 464.
fractures of, 284.
mallet, 465.
Flexor carpi ulnaris tendon, calcinosis in region of,
Foot, arthrodesis of, late results, 496.
peritalar intra-articular, for paralytic flail foot,
503.
club, Kite method of treatment, 463.
relapsed, 287.
flail, paralytic, pan-arthrodesis for, 503.
Lisfranc fracture-dislocation of, 535.
metatarsal bones, absorption of, 466.
metatarsus primus varus, correction of, 415.
paralytic flail, pan-arthrodesis for, 503.
instability of (editorial), 493.
pes cavus, 284.
pyogenic infection of, 589.
talipes calcaneo-valgus with congenital posterior
bowing of tibia, 50.
tarsal movements, 259.
Forearm, bone defects in, bridging of, 476.
fracture, Monteggia, with posterior dislocation
of radial head, 65.
of radial head with distal radio-ulnar dislocation,
244.
of radius and ulna, 548.
rotation, 285.
Fracture callus, effect of vitamin E deficiency on,
473.
cases, rehabilitation in, 141.
complicating Paget’s disease, 331.
healing of, 47.
in syphilitic bones, 583.
medullary nailing of (correspondence), 291.
see also under names of bones affected.
French Society of Orthopaedics and Traumatology,
anual meeting 1950, 189.

G
Ganglia, sympathetic, transmission in, 455.
Ganglio-neuroma in loin (demonstration), 137.
Geiger counter, use in estimating blood supply to
femoral head, 475.
Genicular arteries, 264.
artery, inferior lateral, false aneurysm of, after
lateral meniscectomy, 285, 567.
Genito-urinary tuberculosis in bone and joint
disease, 462.
George VI, illness of (editorial), 483.
Girdlestone, Cathorne Robert, obituary, 130.
Scholarship, created by Lord Nuffield, 135.
Guildal, Paul, development of Danish Organisation
for Crippled Welfare under, 467.
obituary, 483.
Guinea-worm, osteitis secondary to infestation with,
590.

H
Haemarthrosis as cause of synovial pigmentation,
436.
Haemochromatosis of synovial tissues, 436.
synovial pigmentation in, 437.
Haemosiderosis of synovial tissues, 436.
Hallux rigidus, treatment of, 644.
valgus, 578.
treatment of, 644.
Hand, infections of, 646.
injuries of, 643.
Madura, 889.
Hindquarter amputation, 460.
Hip, arthrodesis of, 474.  
- ischiop-femoral, 461; (demonstration), 137.  
- by posterior approach, 365.  
- late results, 474.  
arthroplasty of (discussion), 140.  
arcrey prosthesis in, 468, 475.  
cup, 468.  
- unsuitability of polyethylene for, 392.  
spring exerciser for, 634.  
Charcot’s arthropathy of, treated by subtrochanteric osteotomy, 136.  
coxal vara congenita, 475.  
developmental, 478.  
dislocation, central, 465.  
congenital, 288, 562, 643.  
closed reduction for, 474.  
- conservative treatment by Le Damany’s method, 475.  
- early diagnosis in, 478.  
femoral rotation osteotomy in, 474.  
- intermediate-late results of treatment, 281.  
lateral radiographs of, 465.  
old, of adult, resection-reconstruction in treatment, 474.  
- operative treatment, 282.  
- reduction and retention, 282.  
Robert Jones double adduction frame for, 141.  
treatment of, 644.  
of both, and knees in child, 137.  
persistent, in adults, arthroplasty for, 283.  
traumatic anterior, 602.  
joint, artificial, 465.  
McMurray osteotomy, internal fixation after, 644.  
- with trifin nail, 418.  
osteoarthrosis of, bilateral, 465.  
osteochondromatosis of, 80, 85.  
Perthes disease, ambulatory treatment, 286.  
pseudarthrosis of, 475.  
still, surgery of, (discussion), 137.  
subluxations of, treatment by osteotomy, 138.  
tuberculosis of (editorial), 147.  
- complications of, 152.  
- prognosis in, 149.  
Honours, King’s birthday, 455.  
Hormones, sex, and bone, 642.  
clinical uses of, 643.  
Humerus, calcinosis of lateral epicondyle, 575.  
- destructive lesion of, 589.  
- fracture-separation of upper epiphysis, 284.  
- fractures of neck of, 475.  
- supracondylar, prolonged traumatic arterial spasm after, 363.  
Hunter, John, statue of, 114.  
Hunterian Collection, specimens from, 115, 264, 442, 626.  
Lectures, Royal College of Surgeons of England, 281.  
Hyperostosis, cortical, infantile, 461.  
- atypical case, 248.  
frontalis interna and Paget’s disease of skull, 643.

I

Industrial Medicine, Tenth International Congress, Lisbon, 1951, 646.  
Industry, orthopaedics in, 457.  
International Congress of Industrial Medicine, Tenth, Lisbon, 1951, 646.  
- of Physical Medicine, 1952, 291.  
Poliomyelitis Conference, Copenhagen, 1951.  
programme, 468.  
Society of Orthopaedic Surgery and Traumatology, Fifth Congress, 1951, 468; general meeting, 477.

Intervertebral disc, effects of compression on, 609.  
elastic properties of, 608.  
- experimental incision of, 612.  
in rabbit, 612.  
lumbar, protruded, etiology of, 10.  
- and painful backs, 8; (editorial), 3, 4.  
clinical features, 11.  
- excision of, 8, 31, 470; (editorial), 3, 4.  
- results, 27.  
- late, 285.  
unsatisfactory, 31.  
pathology of, 8.  
pathological changes, 471, 472.  
physical properties, 607.  
puncture, diagnostic, 471.  
Ireland, Northern, history of orthopaedic surgery in, 644.  
Irish Orthopaedic Club, meetings, 644.  
Ischaemic contracture, Volkmann’s (editorial), 298.  
relationship to fracture of femur, 336.  
treatment by tendon transplantation, 359.  
necrosis and regeneration of tibialis anterior muscle after rupture of popliteal artery, 348.  
Ischial-femoral arthroplasty by posterior approach, 365.  
- late results, 474.  
Italian Society of Orthopaedics and Traumatology, Thirty-fifth Congress, 140.

J

Japan, recent developments in orthopaedic surgery, 290.  
Japanese Orthopaedic Society, activities of, 290.  
Joints, disease, genito-urinary tuberculosis in, 462.  
effect of partial vitamin C deficiency, 473.  
movements of, mechanical structure of articulating cartilage, 251.  
tuberculosis, treatment by streptomycin with operation, 473.  
Jones, Robert, double adduction frame for congenital dislocation of hip, 141.  
Gold Medal and Prize awarded to W. A. Law, 287.

K

King George VI, illness of (editorial), 493.  
Kite method of treatment of club foot, 463.  
Knee, arthrodesis of (demonstration), 136.  
cavernous haemangioma of, 106.  
ligaments of, 444.  
meniscectomy, injury to popliteal artery during, 571.  
lateral, traumatic aneurysm complicating, 285, 567.  
prepatellar neuralgia, post-traumatic, 286.  
specimens from Hunterian collection, 626.  
synovial cavity, 442.  
Knees and hips, dislocations of both, in child, (demonstration), 137.  
Kuntscher nailing of fractures, 291.

L

Latin America, orthopaedic surgery in, 1900-1950, 468, 647.  
Latin-American Congress of Orthopaedics and Traumatology, 141.
Law, W. A., award of Robert Jones Gold Medal and Prize to, 287.
Legs, equalisation of length of (demonstration), 137.
post-thrombotic sequelae in, treatment of, 139.
shortening, 462.
tuberculosis of, 644.
ucers, 467.
 Lisfranc fracture-dislocation of foot, 535.
Liverpool Regional Orthopaedic Club meeting, 137.
School of Orthopaedics and Repertory Theatre, 466.
University, appointment of Professor of Orthopaedic Surgery, 464.
award of Ph.D. by, 642.
Master of Orthopaedic Surgery, graduates and examiners, 135.
Lumbo-sacral fusion by Chandler’s method, 463.
H-graft in, 467.
prosthesis and graft in treatment of lumbar pain and sciatica, 471.

M

McFarland, R. L., appointed Professor of Orthopaedic Surgery in University of Liverpool, 642.
McLaughlin, R. S., Foundation in Surgery, establishment of, 644.
McMurray, Professor T. P., memorial to, 484.
McMurray’s osteotomy, internal fixation after, 644.
with trinf nail, 418.
Manchester Hospital Region clinical meetings, 465.
Mansfield-steral joint in ankylosing spondylitis, 56.
in rheumatoïd arthritis, 60.
Melanoma, malignant, 600.
Melorheostosis, 461.
scleroderma with, 430.
Meningocele, intrathoracic lateral, spinal deformity and multiple neurofibromatosis, 87.
Meniscectomy, injury to popliteal artery during, 571.
lateral, traumatic aneurysm complicating, 295, 567.
Metaphysial dysostosis, case of renal rickets simulating, 231.
Metatarsal bones, absorption of, 466.
Metatarsalgia, Morton’s, causative mechanism in, 94, 293.
Metatarsus primus varus, correction, 414.
Methylacrylic plastic, bone reaction to, 468, 475.
Midtarsal joint, 262.
Monteggia fracture with posterior dislocation of radial head, 65.
Morton’s metatarsalgia, causative mechanism in, 94, 293.
Mouse, effects of oestrogens on symphysis pubis in, 643.
Myelography, epidural, 471.
lumbar, with water soluble medium, 471.
Myeloma, multiple, and senile osteoporosis, differential diagnosis of, 135.
Myositis ossificans complicating anterior poliomyelitis, 594.

N

Nail-plate fixation of trochanteric fractures, 192.
Nail, trinf, internal fixation of McMurray osteotomy with, 418.
Nailing, medullary, and homogenous bone graft in treatment of large defects of long bones, 476.
Nairobi Orthopaedic Centre, work of, 280.
Nerve fibres, size of, 455.
impulse, response of motor end-plate to, 455.
injured, repair of, 455.
peripheral, injuries, factors influencing functional recovery, 281.
sympathetic, post-ganglionic, enzyme at end of, 455.
Nervous system, peripheral, Festival meeting on, 485.
Netherlands Orthopaedic Association, 466.
Neurofibromatosis, multiple, with intrathoracic meningocele and spinal deformity, 87.
Neumtra, plantar digital, 477.
Neuromuscular transmission, special mechanisms of, 455.
Nipple, Paget’s disease of, 449.
Nisbet, N. W., appointed Associate Professor of Orthopaedics in University of Otago, 645.
Nisbet, N. W., recently appointed Professor of Orthopaedics, 130.
Orthopaedic Centre, Oxford, future of, 463.
lectures at, 134.

Osteomyelitis, 141.
acute haematogenous (editorial), 6.
chronic (demonstration), 137.
Osteomyelitis, first recurrence eighty years after infection, 110.
Osteomyelitis, impair growth of fibula after, 136.
staphylococcal, of clavicle during scarlet fever (demonstration), 136.
Osteotomy, Paget, Otago University, appointment of Associate Professor of Orthopaedics, 645.
Ovarian cycle in birds, biochemical changes in, 643.
formation and mobilisation of medullary bone in, 642.
Oxford University, Nuffield Orthopaedic Centre, lectures at, 134.

P
Paget, Sir James, biography, 446; portrait, 447.
Paget’s disease complicated by fractures, 331.
by sarcoma, 323.
complications of (fractures), 465.
of bone, 449.
of nipple, 449.
of skull and hyperostosis frontalis interna, 643.
quiet necrosis, 450.
Pain distribution in intervertebral disc protrusion, 11.
sensibility, anatomy of, 456.
Paraplegia, spastic, in late adult life, 644.
traumatic, without injury to vertebral column, 543.
Paraplegic patient, care of, 460.
Paralysis, new walking-aid for, 122.
Parathyroid, clinical physiology of, 289.
Patella, lateral dislocation of, 138.
preparietal neuralgia, post-traumatic, 286.
recurrent dislocation of, 140.
Pectoralis major transplant with arthrodesis of shoulder in injury to upper trunk of brachial plexus, 598.
minor transplant for paralysis of serratus anterior, 228.
Pelligrini-Stieda’s syndrome coexisting with rheumatoid fever, Baker’s cyst and periartthritis of shoulder, 646.
Pelvis, disruption of, 112.
effects of oestrogens on symphysis pubis in mouse, 643.
tuberculosis of, 644.
symphysis pubis, 646.
Penicillin treatment of actinomycosis of spine, 215, 482.
of osteomyelitis in infants, 74.
Peripheral nerve injuries, factors influencing functional recovery of, 281.
nervous system, Festival meeting on, 455.
Peritarsal joint, 259.
Perthes disease, ambulatory treatment of, 286.
Pes cavus, etiology and treatment, 284.
Pioneers of osteogeny—Frederick Augustus Dixey, 275.
Pisiform-triquetral joint, osteoarthrosis of, 532.
Plantar digital neuroma, 477.
Plastic surgery, Festival meeting on, 456.
Plastics in orthopaedic surgery, 463.
Polyomyelitis, acute anterior, in newborn infant, 136.
acute cases, 136.
Polyomyelitis, early symptomatology, 457.
electrical reactions in, 463.
epidemiology of, 458.
Festival meeting on, 457.
myositis ossificans complicating, 594.
treatment in convalescent stage, 458.
earlier stage, 458.
viruses, 457.
Polythene, unsuitability for movable weight-bearing prosthesis, 392.
Popliteal artery, injury to, during meniscectomy, 571.
rupture of, ischaemic necrosis and regeneration after, 348.
Portuguese Orthopaedic Society, formation of, 468.
Post-ganglionic sympathetic nerves, enzyme at endings of, 455.
Pott’s paraplegia, antero-lateral decompression for, 461.
Prostheses, metallic, for replacement of bone resected for tumour, 476.
movable weight-bearing, unsuitability of polythene for, 392.
Pseudoarthrosis of hip, 475.
of tibia, 464.
supraglenoidal, 629.
Pubis, ostitis of, after appendix abscess (demonstration), 136.

Q
de Quervain’s disease, 96.

R
Radial nerve paralysis, improved splint for, 272.
Radioactive isotope studies of calcification of bone, 138.
Radioactivity, natural acquisition of, in body, 646.
Radio-ulnar dislocation, distal, with fractures of radial head, 244.
Radius and ulna, fractures of, 548.
greenstick, 557.
fractures of head of, 465.
with distal radio-ulnar dislocation, 245.
of shaft of, 553.
posterior dislocation of head in Monteggia fracture, 65.
von Recklinghausen’s disease with intrathoracic meningocele and spinal deformity, 87.
Rehabilitation of disabled worker, 646.
Revue française d’Orthopédie, new title of, 139.
Rheumatic fever coexisting with Pellegrini-Stieda’s syndrome, Baker’s cyst and periartthritis of shoulder, 646.
Rheumatoid arthritis, manubrio-ster nal joint in, 60.
Rickets, renal, case simulating metaphysical dysostosis, 231.
Robert Jones Gold Medal and Prize awarded to W. A. Law, 287.
Royal College of Surgeons of England, Hunterian Collection, specimens from, 115, 264, 442, 626.
Hunterian lectures, 281.
Society of Medicine and British Medical Association, Festival symposia, 452.
Orthopaedic Section meetings, 287, 461.

S
Sarcoma, Paget’s, 323.
Sciatica, causes of, 472.
due to disc lesions, 8; (editorial), 3, 4.

THE JOURNAL OF BONE AND JOINT SURGERY
Sciatica, lumbo-sacral prosthesis with graft in treatment of, 471.
surgery in, 8, 31, 285, 469; (editorial), 3, 4.
late results of, 285.
Scleroderma and melorheostosis, 430.
Scoliosis, conservative treatment of, 140.
idopathic, 465.
primary lumbar, 404.
structural, two curve patterns in, 399.
Seddon, H. J., made C.M.G., 454.
Serratus anterior, paralysis of, pectoralis minor transplant for, 228.
Sex hormones and bone, 642.
clinical uses of, 643.
Shoulder, acromio-clavicular dislocation, calcification of coraco-clavicular ligaments after, 646.
arthrodasis of, and pectoralis major transplant in injury to upper trunk of brachial plexus, 589.
compression, 186.
periartitis of, coexisting with Pelligrini-Stieda’s syndrome, rheumatic fever and Baker’s cyst, 456.
supraglenoid pseudarthrosis, 629.
skeletal abnormalities, experimental causation in developing chicks, 476.
skeleton, general affections of, 461.
Skin grafting, early, for burns, 459.
homografts for extensive burns, 459.
Skull, hyperostosis frontalis interna and Paget’s disease, 643.
osteitis of, 587.
Paget’s disease of, and hyperostosis frontalis interna, 643.
Société française d’Orthopédie et Traumatologie, annual meeting, 1950, 139.
South-East Metropolitan Regional Orthopaedic Club meeting, 464.
South-West Orthopaedic Club meetings, 135, 643.
Spastic paralysis, new walking aid for, 122.
in late adult life, 644.
spinal cord injury in neck without damage to vertebral column, 543; (editorial), 494.
Spine, actinomycosis of, 205.
treated with penicillin and streptomycin, 215; (correspondence), 482.
antero-lateral decompression for Pott’s paraplegia, 461.
cervical, atlanto-axial fracture dislocation, 108.
injuries of atlanto-axial joint, 434.
deformity of, intrathoracic meningocoele and multiple neurofibromatosis, 87.
fusion, follow-up of operations for, 136.
idopathic scoliosis, 465.
primary lumbar, 404.
structural, two curve patterns, 399.
instability of, and low back pain, treatment of, 135.
tomography and planigraphy in examination of, 646.
tuberculosis of, complications of, 520.
conservative treatment of, 517.
Splint, improved, for radial nerve paralysis, 272.
Spondylitis, ankylosing, manubrio-sternal joint in, 56.
Spondylothesis, operative treatment by transperitoneal approach, 139.
Stapler, improved, 274.
Sternoclavicular joint, recurrent dislocation, arthrodasis of subclavus in, 240.
Streptomycin treatment of actinomycosis of spine, 215; (correspondence), 482.
with operation in treatment of bone and joint tuberculosis, 473.
Subastragaloid joint, arthrodasis of, 466, 475.
Subacromial bursa, calcinosis in, 573.

SUBJECT INDEX

Tuberculosis of, 464.
Synovial cavity of knee, 442.
pigmentation caused by haemarthrosis, 436.
tissues, haemochromatosis of, 436.
haemosiderosis of, 436.
Syphilis, congenital, affecting long bones in Bantu children, 578.
of bones, fractures in, 583.
in Africans, 584.
of long bones in Bantu, 578.  

T

talipes calcaneo-valgus with congenital posterior bowing of tibia, 50.
cavus, 284.
tarsal joints, movements of, 258.
tarsus, ligaments of, 116.
temporo-mandibular joint, approach to, 465.
tendon transplantation in treatment of Volkman’s contracture, 359.
tenodesis of subclavus in treatment of recurrent dislocation of sterno-clavicular joint, 240.
thrombosis, sequelae in legs, treatment of, 199.
thumb, calcinosis of, 575.
tendons of, short extensor, anatomy of, 96.
spontaneous rupture of, 467.
tibia, congenital posterior bowing of, with talipes calcaneo-valgus, 50.
fractures of upper end of, 160.
pseudarthrosis of, 464.
in childhood, 47.
results of by-pass graft in treatment of, 37.
pathogenesis of, 43.
vara, 476.
tibialis anterior muscle, regeneration after rupture of popliteal artery, 348.
toe, hallux valgus, 376.
and hallux rigidus, treatment of, 644.
toes, claw, treatment by multiple transfers of flexor into extensor tendons, 539.
tomography in orthopaedic diagnosis, 462.
tooth structure, 137.
phase-contrast microscopy in investigation of, 138.
triceps tendon, tuberculosis involving, 606.
trochanter, greater, calcinosis in region of, 577.
trochanteric fractures treated by nail-plate fixation, 192.
treatment of, 508.
tuberculosis involving triceps tendon, 606.
tuberculosis, bone and joint, treatment of (discussion), 138.
by streptomycin with operation, 473.
genito-urinary, in bone and joint disease, 462.
miliary, in newborn infant, 136.
hip (editorial), 147.
complications of, 152.
prognosis in, 149.

VOL. 33 B, NO. 4, NOVEMBER 1951
SUBJECT INDEX

Tuberculosis of pelvis and lower limb, 644.
of spine, complications of, 520.
conservative treatment, results, 517.
of symphysis pubis, 464.

U
Ulna and radius, fractures of, 548.
greenstick, 557.
Monteggia fracture with posterior dislocation of radial head, 65
Ulnar nerve, unusual lesion of, 604.

V
Vereinigung der Orthopäden Österreichs, refounded, 140.
Vertebral column, see Spine.
Vienna Accident Hospital, Congress of Traumatic Surgery at, 140.
Vitallium cup, changes in femoral head underlying, 119.
Vitamin C deficiency and experimental arthritis, 473.
partial, effect on joints, bones and wound healing, 473.
E deficiency, effect on fracture callus, 473.
effect on bone growth, 473.
Vitamins and osteopathies, 472.
Volkmann's ischaemic contracture, 139; (editorial), 299.
relationship to fracture of femur, 336.
treatment by tendon transplantation, 359.

W
War wounds, cancer as sequel to, 167.
Watson-Jones, Sir R., elected first Honorary Fellow of Association of Surgeons of East Africa, 646.
Wounds, healing, effect of partial vitamin C deficiency on, 473.
infection with actinomyces, 221.
war, cancer as sequel to, 167.
Wrist, arthrodesis of, for osteoarthritis (demonstration), 137.
calcinosis on back of, 575.
de Quervain's disease, 96.
interosseous ligaments of, 118.
osteoarthritis of pisiform-triquetral joint, 532.

vii
VOLUME CONTENTS

Advanced Actinomycosis of the Spine treated with Penicillin and Streptomycin

M. S. Brett, London 215

Infection of Wounds with Actinomyces

C. H. Cullen, Wigan, and Mary E. Sharp, Swansea 221

Pectoralis Minor Transplant for Paralysis of the Serratus Anterior

J. Paiva Chaves, Lisbon 228

A Case of Renal Rickets Simulating "Metaphysial Dysostosis"

G. M. Müller, Colombo, and H. A. Sissons, London 231

Tenodesis of Subclavious in the Treatment of Recurrent Dislocation of the Sternoclavicular Joint . . . . . . . H. Jackson Burrows, London 240

Fractures of the Radial Head with Distal Radio-ulnar Dislocation

Peter Essex-Lopresti, Birmingham 244

An Atypical Case of Infantile Cortical Hyperostoses . Ian D. Kitchin, Lancaster 248

Experience with the Use of Refrigerated Homogenous Bone Philip D. Wilson, New York 301

Homografts and the Bone Bank . . . . . . . . J. J. Herbert, Aix-les-Bains 316

Studies of Paget's Disease (Osteitis Deformans) . . . . Max Lake, Melbourne 323

Volkmann's Ischaemic Contracture and its Relationship to Fracture of the Femur

Stuart A. Thomson and Leo J. Mahoney, Toronto 336

Ischaemic Necrosis and Regeneration of the Tibialis Anterior Muscle after Rupture of the Popliteal Artery . . . . J. S. Horn and S. Sevitt, Birmingham 348

The Treatment of Established Volkmann's Contracture by Tendon Transplantation

Athol Parkes, Glasgow 359

Prolonged Traumatic Arterial Spasm after Supracondylar Fracture of the Humerus

J. C. F. Cregan, Manchester 363

Ischio-femoral Arthrodesis by the Posterior Approach

J. A. Cholmeley, Stanmore, and E. J. Nangle, Salisbury, Southern Rhodesia 365

Observations on Hallux Valgus . . . . R. H. Hardy and J. C. R. Clapham, London 376

The Unsuitability of Polythene for Movable Weight-bearing Prostheses

Two Curve Patterns in Idiopathic Structural Scoliosis . . J. I. P. James, London 399

Alkaptonuric Arthritis . . . . Sidney Sacks, Johannesburg 407

A Method of Correcting Metatarsus Primus Varus . . . V. H. Ellis, London 415

Internal Fixation of the McMurray Osteotomy with a Trifin Nail Robert Roaf, Liverpool 418

An Irregular, Familial Chondro-osseous Defect . . . W. P. U. Jackson, Cape Town 420

Scleroderma and Melorheostosis

N. M. Thompson, C. E. L. Allen, G. S. Andrews and F. N. Gillieald, Durban 430

Injuries of the Atlanto-axial Joint . . . . A. R. Hamilton, Sydney 434

The Late Results of Arthrodesis of the Foot . . . . A. J. Drew, Walsall 496

Pan-arthrodese for Paralytic Flail Foot . . . . M. Bastos Ansart, Barcelona 503

Treatment of Trochanteric Fractures . . . . J. C. Scott, Oxford 508

Trochanteric Fractures of the Femur . . . . R. H. V. Hafner, Chertsey 513

Tuberculosis of the Spine . . . . . J. Dobson, Appleby Bridge 517

Osteoarthritis of the Pisiform-triquetral Joint . . . S. A. Jenkins, Eastbourne 532

A Dangerous Type of Fracture of the Foot . . William Gissane, Birmingham 535

The Treatment of Claw Toes by Multiple Transfers of Flexor into Extensor Tendons

R. G. Taylor, Oxford 539

The Mechanism of Injury to the Spinal Cord in the Neck without Damage to the Vertebral Column . . . . A. R. Taylor, Edinburgh 543

Fractures of the Radius and Ulna . . . . E. Mervyn Evans, Swansea 548
## VOLUME CONTENTS

On Congenital Dislocation of the Hip . . . . Gerald L. Burke, Vancouver 562
A Complication of Lateral Meniscectomy
  T. J. Fairbank, Cambridge, and E. S. Jamieson, Newmarket 567
Injury to the Popliteal Artery During Meniscectomy . W. T. Ross, Johannesburg 571
Calcinsis . . . . . . . . . . A. R. Hamilton, Sydney 572
Syphilitic Disease of the Long Bones in the Bantu
  Samuel Shapinker and De Villiers Minnaar, Johannesburg 578
Chronic Bone Infections in Africans . . . . T. L. Lawson, Sheffield 584
Hyperplastic Callus in Osteogenesis Imperfecta . . A. G. Apley, West Byfleet 591
Myositis Ossificans Complicating Anterior Poliomyelitis
  Francis V. Costello, New York, and Austin Brown, Oswestry 594
Pectoralis Major Transplant with Arthrodesis of the Shoulder in a Case of Injury to the
  Upper Trunk of the Brachial Plexus . K. S. Grewal and Iqbal Singh, Amritsar 598
Malignant Melanoma . . . . . . . . Gawad Hamada, Alexandria 600
An unusual Lesion of the Ulnar Nerve . . . . . F. C. Dwyer, Liverpool 604
Tuberculoma Involving the Triceps Tendon . . . . J. Paiva Chaves, Lisbon 606

### Pathology and Basic Sciences

Specimens from the Hunterian Collection . . . . R. J. Last, London 114
Specimens from the Hunterian Collection . . . . R. J. Last, London 264
Specimens from the Hunterian Collection . . . . R. J. Last, London 442
Specimens from the Hunterian Collection . . . . R. J. Last, London 626
Changes in the Femoral Head Underlying a Vitallium Cup
  Alexander Gibson and Thomas H. Williams, Winnipeg 119

Movements of Bones and Joints . . . . M. A. MacConaill, Cork 251
Tarsal Movements . . . . . . . . Edmund Shephard, London 258
Citric Acid and Calcium Metabolism . . . . T. F. Dixon, London 268
Experimental Investigations into the Physical Properties of the Intervertebral Disc
  W. J. Virgin, Ludhiana, Punjab 607
Experimental Incision of the Intervertebral Disc J. W. Smith and R. Walmsley, St Andrews 612
Supraglenoid Pseudarthrosis . . . . A. A. Belton and F. Davies, Sheffield 629

Camp
Dorsolumbar Supports

The extended height above the waistline at the back and the shoulder and back straps are designed to support the major portion of the dorsolumbar vertebrae, while the side-lacing adjustments operate the required firm control.

Illustrated: An example from the Camp series of basic dorsolumbar supports.

Camp Supports are supplied and fitted by Authorized Agents throughout the country and Camp trained surgical fitters are always available for attendance at hospitals, nursing homes or at the patient’s home.

Camp Supports are designed for use in the treatment of physical disability, deformity or disease.

Reference Book for Physicians and Surgeons available free on request.

The MacLellan-Wright walking-plaster appliance

A NEW WALKING AID for all walking-plaster cases

Perfect Balance and Gait
Smooth heel-and-toe movement. No lurching or bobbing. Patients with bilateral plasters can walk with ease.

Adaptability
Suitable for short or full-length plasters and for patients of all ages.

Economy
Saves plaster-of-paris bandages. Eliminates side-irons and wooden rockers. The very hard-wearing rubber-asbestos sole enables the whole appliance to be used several times over for successive patients.

Cleanliness
Complete protection of the plastered foot. No soiling of bed linen.

Female patient weighing 15 stones. Short below-knee plaster for Potts' fracture.

This appliance is designed to be worn as a shoe over the plaster cast on the foot. The sole, of rubberised asbestos, is provided with non-skid rubber treads with correct curvature to give a smooth heel-and-toe movement. The upper, of strong rubberised canvas with metal eyelets, forms a waterproof over-shoe, which is extremely hardwearing and gives complete protection to the plaster cast.

Available in the following sizes:—
6 and 7 in.—suitable for children.
8, 9, and 10 in.—suitable for adults.

Sizes refer to the length of the sole.

For a full technical appreciation, see The Lancet, Nov. 11, 1950 (page 519).
Case Abstract:

- Diagnosis: Herniated Intervertebral Disc (L5-S1).
- Patient 29 years old, height 6 ft. 1 in., weight 11 stone 1 lbs.
- First symptoms of low-back pain developed 1943; acute symptoms 1948.
- A Spencer Lumbo-Sacral Support as shown, prescribed November 1948, provided relief of painful symptoms, allowed resumption of full time heavy job.
- Surgery has been delayed indefinitely.

This patient's lordotic posture—with forward tilt of pelvis and sagging of abdomen, chest, diaphragm—causes his weight to rest on the spinal discs at bad mechanical angles. impairs body functioning.

Note the postural correction obtained with this Spencer Support designed on prescription for him. The flattening out of the Lordosis, the raising of abdominal and thoracic organs, improves functioning.

The four rigid steels at back and one under each arm are removable to facilitate re-shaping as posture improves and for easier support laundering. Note location of the outside pelvic binder.

Straps and non-slipping slides at centre front enable the patient to adjust the support quickly and accurately. (All patients are instructed to adjust their supports while lying down with hips elevated.)

Spencer Supports for abdomen, back and breasts are therapeutically effective because: each is individually designed, cut, and made—and does NOT lose its shape. A support that loses its shape loses its effectiveness! Spencer maintains its supportive values—encourages exercise of muscles—provides such comfort it is often worn for sleeping.

For further information write to:

SPENCER (BANBURY) LTD.
Consulting Manufacturers of Surgical and Orthopaedic Supports

VITALLIUM*
SURGICAL APPLIANCES
ARE PROVED BY TIME AND USE TO
BE COMPLETELY COMPATIBLE WITH
HUMAN BONE AND TISSUE

• NEARLY 15 YEARS OF AUTHENTIC USE
Since 1936, appliances of the unique Vitallium alloy have been in use in the body—often buried whence they cannot be removed. No other alloy can show a comparable record. It is a guarantee that Vitallium appliances are safe.

• OVER 190 REFERENCES IN SURGICAL LITERATURE
During these years, surgeons throughout the world have tested many different appliances made from the alloy. Their reports have appeared in all the important surgical periodicals. As a result the Vitallium range of appliances is the most extensive of its kind. A Vitallium appliance can be obtained for almost every need.

• ACCLAIMED BY EMINENT SURGEONS
THE WORLD OVER
In the great majority of instances where Vitallium appliances were tried for the first time, they proved successful. New appliances of a kind hitherto not considered feasible are now available. It is not surprising that eminent surgeons look on Vitallium appliances as a boon to the profession.

• A UNIQUE ALLOY: STANDARDISED:
SAFEST TO USE
Vitallium appliances contain no iron, and are not subject to rust; they can be left in the body indefinitely without fear of foreign-body reaction. The alloy is a unique combination of cobalt, chromium and molybdenum. It is of a uniform hardness and its composition never varies.

• THE MOST EXTENSIVE RANGE AVAILABLE TO THE PROFESSION
You need not seek beyond the wide variety of Vitallium appliances for your needs. There is generally an appropriate appliance available... one which has proved itself in the body—and is safe to use.

Select the Tower Tables Which Fit Your Needs

ROGER ANDERSON MODELS

**No. 800 Series**—Many hospitals and clinics will find this table adequate for their needs. It provides complete facilities for applying casts to any part or parts of the body, hip work, radiographic procedures, true and reverse Trendelenberg. Full table top makes it useful for minor surgery. Lowest priced table available offering such facilities.

**No. 1300 Series**—This versatile model, with foot-operated, full-range hydraulic lift, is designed for hip surgery procedures—true and reverse Trendelenberg—manipulations of both upper and lower extremities, spine and neck, all about anatomical centers—all x-ray, cast and operative procedures.

**No. 1700 Series**—Designed by Dr. Roger Anderson to incorporate all the sound basic principles of modern orthopedic surgery and long the established leader, this table provides the best and most complete facilities for any part of the body, including prone, lateral and perineal positioning.

Write for illustrated brochure “Tables by Tower,” prices, or specification sheets on above tables.

(Near Chicago)
This new Desoutter electric power Tool was developed specially to make the removal of surgical plasters a fast and safe operation—safe for both patient and operator. The circular saw does not rotate, it oscillates through an arc only a few degrees wide at about 18,000 strokes per minute. This ultra rapid short stroke movement will not cut when it is in contact with mobile skin or soft material. But when up against hard materials like plaster it is an extremely efficient cutter. Please write for the leaflet which explains the method of use.

Original Künscher Cloverleaf Type

Illustrating original design of Künscher's Cloverleaf type intramedullary nails. The diameters shown are \( \frac{1}{8} \) in. (6 mm.), \( \frac{3}{16} \) in. (8 mm.), \( \frac{1}{4} \) in. (9.5 mm.), and \( \frac{5}{16} \) in. (11 mm.), and illustrates the curved cutting ends. State lengths when ordering.

The great strength of the Cloverleaf Type Nail is obtained in the special forming of this pin. This forming is obtained by a cold-drawn process and is found only in the original Künscher Cloverleaf Nail. The strength is equal to that of a solid nail. Type of metal used is a special stainless steel that is non-corrosive and non-magnetic and is drawn to the proper hardness to prevent bending or breaking when a great stress is applied.

A perfect Appliance for its purpose:

SALTS' SACRO-ILIAC BELT

Designed by an eminent orthopaedic specialist, this Belt is available in styles for ladies and gentlemen. Its perfect efficiency is accompanied with complete comfort. Rapidly restoring the normal relationship of the sacral and iliac bones, it also exerts a beneficial effect on the tone of the abdominal viscera. Not the least commendable thing about this Belt is the fact that it enables the patient to make early resumption of normal activities. Further details and Measure/Order forms available to medical people on request.

It depends what you mean by 'Banking'

OF COURSE we safeguard money and cash cheques. But we go further. We maintain specialist departments whose functions, although not 'banking' in the usual sense, can nevertheless be used to very good purpose. These departments will, for example, act as your Executor, help with your Income Tax problems, obtain your currency when you travel abroad. They will do many more things besides. But the moral of this multiplicity of functions is simply this: if you have any problem of finance or business the chances are that we can help you deal with it. And that is what we mean by 'banking'.

WESTMINSTER BANK LIMITED
for finest detail

ILFORD Ilfex X-ray film is double-coated with an emulsion of extremely high resolving power. It is thus capable of revealing bone structure and reproducing fine detail, particularly in radiographs of the limbs and extremities. Previously such exceptional definition has been found only in very slow emulsions but Ilfex combines the two qualities so important in X-ray work—Speed and Definition. The Ilfex emulsion is highly sensitive to direct X-rays and is intended for use without intensifying screens.

Clarks Curator Heel
— but the child with valgus feet would feel the difference
at once. If T-irons and surgical boots can possibly be
avoided doctors will do so, recommending instead a light-
weight corrective heel. In certain foot-ailments and leg
weaknesses Clark's "Curator" heel is of great benefit. The
child won't feel "marked out" from others, since the
heel is almost unnoticeable.

Full details are available to the
medical profession and to children's
clinics and hospitals, on applica-
tion to Clarks.

Can easily be fitted to certain Clark's
shoes in sizes infants' 7 to maids' 5½ (youths' 1½).

Feather-light casts

Glassona casts are of an open-work structure admitting both light and air, unaffected by water, extremely light in weight, permeable to X-ray and hard wearing — they are ideal for all conditions requiring long-term immobilization.

Casts are constructed from bandages made from a mixture of glass and cellulose acetate fibres. The material resembles stockinette. The bandages are prepared for use by immersion in a special setting fluid. Further details available upon request to the Medical Division of the Manufacturers.

HALF A CENTURY OF PROGRESS IN ORTHOPAEDIC SURGERY
1900-1950

A special issue of the Journal of Bone and Joint Surgery, published in November 1950, devoted to an account of progress in Orthopaedic Surgery during the past fifty eventful years.

Paper cover copies 21 - Bound 25 -

Excerpt from a subscriber's letter:

"The half-century number is superb—a magnificent production. It really is a great achievement and there can be no doubt that of all the issues this is the one that will survive and be referred to again and again in future months and years as a reference volume . . . an epoch-making production."

Printed in Great Britain by Pillans & Wilson Limited, Edinburgh
Each batch of Ethicon suture material is tested for knot-pull strength on the Incline-Plane Tester in the laboratory. Visual evidence of strength at the knot is shown on the Tensilgram chart. To the surgeon, suture strength is most essential when the knot is being tied. This is the time of greatest strain. New exclusive processes developed by Ethicon have resulted in three new contributions to surgical techniques. (1) Knot breakage is reduced to minimum. (2) Smaller suture sizes are found adequate and foreign body reaction is reduced. (3) Because of greater strength, minimum sizes can now be used where catgut is indicated.

**QUICKER HEALING, LESS SCAR TISSUE WHEN FINER-GAUGED SUTURES ARE USED**

The diagram on the left shows possible reductions in amounts of suture material embedded in tissue when smaller sizes are used. Better results are achieved from the use of smaller sizes in sutures. It is now generally recognised that the greater the amount of suture embedded in the tissue, the more pronounced is the inflammatory reaction, the slower the onset of healing, and the larger the amount of scar tissue formed.

Smaller gauges of catgut, paradoxically, maintain their integrity longer than larger sizes. The smaller sizes arouse decidedly less foreign body reaction. The increased strength of Ethicon Catgut Sutures permits the surgeon to use smaller sizes and secure all the advantages inherent in the decreased volume of suture used. Quicker healing, decrease in scar formation and better surgical results are attained.

Look to the leaders for leadership...

Ethicon Suture Laboratories Ltd
Bankhead Avenue, Edinburgh

Associate Companies: New Brunswick, New Jersey, Sao Paulo, Brazil, Sydney, Australia
Perfect operating technique coupled with the finest suture materials are frequently not followed by smooth recovery of the patient. Abdominal, and other pains, persisting for many years without direct cause, are one of the surgeon's hazards. Ethicon set out to eliminate this surgical problem which, as confirmed by laparotomy, has been traced to unsuitable glove powders.

**BIO-SORB**

**ABSORBABLE GLOVE POWDER FOR SURGEONS**

BIO-SORB is a wholly safe and efficient glove powder, being a mixture of amylose and amylopectin, derived from corn starch, and treated by special physical and chemical means to prevent gelatinisation. BIO-SORB has the following invaluable properties:

1. Compatible with body tissues.
2. Does not contain formaldehyde.
3. A freely flowing pure white powder.
4. A perfect rubber lubricant, harmless to gloves.
5. Sterilized by standard techniques.
6. Gives the surgeon maximum comfort and accuracy of touch.

BIO-SORB has now been in full surgical use for 18 months in Canada, Australia, and the United States. Full technical and clinical literature from Ethicon Suture Laboratories Limited, Sighthill, Edinburgh.
