Oswestry jacket incorporating hydrostatic pressure in ambulant correction of idiopathic scoliosis, *96.

Oxford accident service, 656.

P

Paget’s disease of bone, complications, 221.
Palsy, birth. See Birth palsy.
Palsy, cerebral. See Cerebral palsy.
Papain, effect on epiphysial cartilage, *836.

Paralysis
infantile. See Poliomyelitis.
spastic. See Cerebral palsy. 

Paraplegia
due to hydatid disease of spine, *499.
Pott’s, treatment, 495.
rehabilitation in, 221.
traumatic (symposium), 213.
ectopic ossification in, 210.

Patella, subluxation, recurrent, 214.

Patello-femoral joint. See Knee.

Pectoralis major transplantation for paralysis of flexors of elbow, *44.
due to muscle aplasia, 428.
new technique, *36.

Pelvis
development and growth, experimental study, 223.
fracture-dislocation, iliac skeletal cross traction in, *779.
osteotomy of, for ectopia vesicae, *754.
See also Acetabulum; Pubic symphysis.

Peripheral nerves. See Nerves: and names of nerves.

Peroneus brevis tendon, cystic degeneration of, *362.
Perthes’ disease. See Hip, osteochondritis.

Pes cavus. See Claw foot.

Pes valgus. See Flat foot.

Pemister-Cleveland method of bone grafting for non-union of fractures, 875.

Phlebothrombosis. See Veins, thrombosis of.

Phosphatase activity in limb bones of growing rabbits, *401.

Plasmin activity in arthritis, *384.

Plastic surgery in orthopaedics, 432.

Poliomyelitis
elbow in, flexor paralysis, tendon transplantation for comparative study, *44.
pectoralis major, new technique, *36.
foot in, arthrodesis of, ankle joint in relation to, *337.
hip in, abductor paralysis, transplantation of iliopsoas for, follow-up, *289.
in infants under six months, incidence and prevention, 885.
lower limbs in appliances for, 885.
length discrepancy, *56.
length equalisation, epiphysial stapling for, 215.

Poliomyelitis
lower limbs in lengthening, tibial, 223.
rotation, external, transplantation of hamstrings to femur for, *70.
pre-natal infection with, 884.
renal lithiasis in, 885.
respiratory disorder in, physiological aspects, 886.
social aspects in very young children, 884.
treatment, orthopaedic, in very young children, 884.
neurotrophic disturbances in, 885.
vaccination (symposium), 883.

Popliteal artery, injury of, complicating dislocation of knee, 878.

Popliteal nerve, lateral, paralysis of, in leprosy, drop foot due to, transplantation of tibialis posterior for, 434.

Prostheses. See Artificial limbs; and under parts of body.

Pubic symphysis, injuries, 632.

Q

Quadriceps femoris tendon, repair by partly separated strips, 882.

Quadriplegia due to fracture-dislocation of cervical spine, 429.

Queen Elizabeth the Queen Mother, opening of new research building at Nuffield Orthopaedic Centre by, 423.

R

Raccliffe Infirmary accident service, 656.

Radial nerve paralysis, tendon transplantation for, 217.

Radiation injury, prevention, bone marrow injection, 223.

Radioactive isotopes, external counting of, in studies of localised skeletal lesions, *558.

Radiography in orthopaedic operations, cassette holder for, mobile, adjustable, *774.

Radioulnar joint, inferior, articular disc of, injuries, 870.

Radius absence of, congenital, 217, 221.
chondroma of, following wrist injury, 632.
fractures shaft, internal fixation of, delayed, *122.
with fracture of ulna, compound, 873.
See also Under Forearm.

Rehabilitation and education of physically disabled boys, establishment of Heaphaistos School for, 450.

Reiter’s disease, radiology, comparison with rheumatoid arthritis and ankylosing spondylitis, *137.

Revue de Chirurgie Orthopedique, editorship, changes in, 224.

Rheumatic diseases, treatment, operative, 636.

Rheumatoid arthritis
hand in, tendon rupture, 629.

knee in, flexion deformity, osteotomy for, supracondylar, 633.
radiology, comparison with Reiter’s disease and ankylosing spondylitis, *137.
toes in, claw excision of metatarsal heads for, 634.
reconstruction of forefoot for, *507.
treatment, joint clearance, 857.

Ribs, fracture of first, due to jiving, *370.

Risser cast, Oswestry pattern, incorporating hydrostatic pressure, in ambulant correction of idiopathic scoliosis, *96.

* Indicates full article or appreciable part.
S

Sacro-iliac joints in Reiter's disease, rheumatoid arthritis and ankylosing spondylitis, 137.

Sacrum, agenesis of, rehabilitation in, 857.

St Bartholomew's Hospital, orthopaedics at, history of (demonstration), 858.

Salmonella osteomyelitis in sickle-cell anaemia and its genetic variants, 716.

Sarcoma

osteogenic, treatment, radiotherapy, 621.

*See also specific terms, and under names of tissues and parts of body.

Saw, Gigli's, introducer for, in McMurray's osteotomy, *776, *777.

Scaphoid bone (carpal), fractures, nonunion of, case against pessimism, 856.

Scaphoid bone (tarsal). See Navicular bone.

Schanz's osteotomy for unreduced congenital dislocation of the hip in adults, 308.

Scheuermann's disease, correction, ambulant, hydrostatic pressure in, *96.

School for physically disabled boys, establishment of Hephaistos School, 430.

Schot, Nicholas and Peter, "crookedness clinic" of, *413.

Sciatic nerve palsy, neonatal, 427.

*See also* Back pain, low; Intervertebral discs, lesions.

Scoliosis, 219.

arthrodensis of spine for, posterior, *260.

new technique, 621.

congenital, 874.

due to osteoid osteoma, *132.

idiopathic

correction, ambulant, hydrostatic pressure in, *96.

in identical twins, *736.

resolving, *105.

infantile structural, *719.

past, present and future, 880.

LONDON HOSPITAL CATGUT

is a British surgical catgut, sterilised by chemical methods instead of by heat.

The process is unique—and renders L.H.C. more flexible and more elastic.

Absorption factors are reliable. Tensile strength exceeds B.P. Standards.

so that the finest gauge suited to the operation can be used with safety.

This means less scar tissue and quicker healing.

always use London Hospital Catgut

the more F·L·E·X·I·B·L·E suture

now packed in the non-splintering ‘Spot’ Tube
Eighty per cent paralyzed by polio, this young mother breathes diaphragmatically with only fifty per cent diaphragmatic function. Breathing was difficult in her old brace, causing physical exhaustion after a few hours in her wheel chair.

Her Spencer Support and Brassiere are individually designed for her to:

★ Stabilize paralyzed muscles so as not to impede the action of associated muscles
★ Elevate abdominal organs to assist pulmonary ventilation
★ Maintain skeletal alignment to prevent further deterioration

Spencer has contributed to increasing vital capacity sufficiently to allow her to care for her home throughout a busy fourteen-hour day.

APPLIANCES SUPPLIED UNDER THE NATIONAL HEALTH SERVICE
THROUGH SUBSIDIARY COMPANY SPENCER (SURGICAL SUPPLIES) LTD.
**ADVANTAGES**

- Proved by biological tests to be completely inert.

- No demineralization of bone.

- Being wrought material overcomes weakness of castings.

- Good tensile strength combined with light weight.

- Impact values and ductility within necessary limits.

- Machineability enables production of all existing surgical implants as well as special requirements.

Charnley's Compression Screw
with Sleeved Angle-Plate

British Patent No. 735628—other patents pending in principal countries of the world.

ANCILLARY INSTRUMENTS used during the insertion of Charnley's Compression Screw, consisting of—

GUIDE WIRE (A)
METAL PROTRACTOR (B)
COUNTER-BORING TOOL (C)
TAPPING DRILL (D)
SCREW DRIVER, T-HANDED (E)
CYLINDRICAL SPANNER (F)
BRACE (Cat. No. 8 2607 Fig. A)

A. Sub-capital fractures
B. Trans-cervical fractures
C. Basal fractures
D. Inter-trochanteric fractures without comminution

All above Ancillary Instruments (except Guide Wire and Brace) are made of STAINLESS STEEL.

The above are typical fractures of the hip which can be successfully treated by means of this new appliance.

FULL DETAILS OF CHARNLEY'S COMPRESSION SCREW AND ANCILLARY INSTRUMENTS WILL GLADLY BE SENT ON REQUEST

Foremost in skin antiseptics

MEDICAL TESTIMONY:

“Perhaps the most valuable of the newer antiseptics is chlorhexidine (‘Hibitane’). It is very active against almost all bacteria; and a single application is effective. At the moment chlorhexidine is perhaps the best compromise between bactericidal effectiveness and harmlessness to the skin.”

Annotation Lancet 1958, ii, 1164.

The new gluconate salt of ‘Hibitane’ and its formulations facilitate the application of this new antiseptic in all fields of use.

Available as:

HIBITANE' DIGLUCONATE (20%, aqueous solution) and dihydrochloride
‘HIBITANE' CONCENTRATE (5%) ‘HIBITANE' OBSTETRIC CREAM

Hibitane

Safe, Quick, Effortless

THE DESOUTTER PNEUMATIC BONE SAW has in the past few years been used with notable success by many famous orthopaedic surgeons. It is quite safe. Because it is a pneumatic tool there is no risk of explosion. Though it is a small instrument, weighing only 1½ lbs., it has ample power and will cut bone grafts with single or double saws with ease. The speed is controlled by the trigger in the pistol grip which is very light in action. The considerable power of the motor, even at slow speeds, makes the insertion of long bone screws very easy and very quick, relieving the surgeon of all physical effort in such operations as the application of onlay grafts and plating work.

The Desoutter pneumatic bone saw will give a lifetime of service with no attention apart from an occasional oiling.

Descriptive literature will gladly be sent on request.

Desoutter

PNEUMATIC BONE SAW

Colindale 6346 (5 lines) Telegrams: Despnuco, Hyde, London.
There is no focusing problem when making close-up colour studies with the 'Kodak' Technical Close-up Outfit. Place the L-shaped frame on the nearest surface of the subject; picture area is indicated by the markings on the arms of the frame, and the whole picture is automatically in focus.

With a blue flash bulb and the Flash Cover in place, exposure is exactly right for perfect colour balance and best rendering of textural quality.

A simple adjustment enables the outfit to be used for half or full length pictures in black-and-white or in colour, by flash or under a wide range of lighting conditions.

**Kodak**

**TECHNICAL CLOSE-UP OUTFIT**

'Kodak' Bantam Colorsnap Camera · 'Kodak' Technical Close-up Frame · 'Portra' Close-up Lens · 'Kodak' Flashholder Model II · 'Kodak' Flash Cover · Carrying Case available, extra.

For Precision Skin Grafting

Here is Orthopedic Frame's answer to the demand for the finest grafting instrument possible.

Graft thickness is accurately obtained by a single calibration lever on the right side of the instrument.
Minimum setting, 5/1000"; maximum setting, 30/1000". Adjustable graft widths, 3", 2 1/4", 1 1/2 inches.

Two rollers in front and one behind the oscillating blade eliminate tension as the skin comes in contact with the disposable blade. Few moving parts...

two year guarantee.

To give body and original shape to skin grafts, use Stryker Skin Tape.

VELROC

Plaster of Paris Bandages

ARE STRONGER
Extensive tests under varying conditions have proved beyond doubt that Velroc Bandages produce the strongest casts.

MORE ECONOMICAL
Greater cast strength from each yard of Velroc Bandage means fewer bandages required — so cast making is quicker.

CLEANER, NON-IRRITANT
Velroc Bandages are much cleaner and more pleasant to use because the creamy plaster adheres so well to the cloth that only a negligible amount is wasted. Velroc Bandages contain no irritating resins.

AND THEY COST NO MORE!
With all these extra advantages, Velroc Bandages are no dearer than ordinary bandages.

The TUPMAN OSTEOTOMY PLATE

Designed to facilitate Displacement Osteotomy of the Hip, the TUPMAN Osteotomy represents a significant advance in modern treatment:

★ It permits precise fitting and accurate adjustment of the McKee nail
★ The danger of bone fragments being fixed in distraction is overcome
★ Four angles of plate available
★ Reinforcing crimp gives strength and rigidity

No. 525 SMo Stainless Steel (B.S.S. EN 58J) TUPMAN Plate

No. 525a " with bracket 85°
No. 525b " with bracket 90°
No. 525c " with bracket 95°
No. 525d " with bracket 100
No. 428 McKee’s Nails 3", 3½", 4", 4½", 5", 5½", 6"
No. 428a " 4½", 4¾", 5", 5½", 5¾", 6"

Each nail is supplied with SMo locking nut, threaded 7 mm. x 1 mm. pitch.
The WAINWRIGHT
OSTEOTOMY PLATE

★ One piece solid forged stainless steel to B.S.S. EN 58J (American equivalent type 316 or SMo)
★ Can be used with ordinary S.P. nail impactor
★ Note two threaded holes, one for location, one for impaction
★ Available in four sizes

No. 425 SMo Stainless Steel (B.S.S. EN 58J)

NEW and IMPROVED McLAUGHLIN APPLIANCE MODEL VI

offers you these advantages:

1. Positive, self-locking Nylok® device in strong 5/16” ‘M’ bolt resists disengagement.

2. Adjustable angularity from 114° to 150° in 6° increments.

3. Cannulated, three-flanged Thornton-type nail, can be used with or without the plate.

Thornton-type nail requires #6879-7 driver shaft. ‘M’ bolt requires #6896-3 socket wrench.
In hypovolemic shock the first essential is the restoration of the circulating blood volume. Dextraven, a sterile, isotonic, colloid solution of the same viscosity as plasma, will maintain blood volume quite as efficiently as plasma or blood. It is compatible with all blood groups, and time-consuming cross-matching procedures are avoided. Only 20%, is excreted in the first 24 hours and its colloid osmotic action maintains blood volume for as long as 72 hours until the normal compensating mechanisms have taken over. Unlike some synthetic plasma substitutes it is completely excreted or metabolised, and it does not accumulate in the organs or tissues of the body.

Dextraven is the only effective blood volume restorer that may be used safely, simply and immediately.

The infusion of blood is only indicated when an exogenous supply of red cells is essential for the preservation of life or the prevention of permanent morbidity.

**PRESENTATION:**
Bottles of 540 ml. 6%, dextran in 0.9% saline and 6%, dextran in 5% dextrose.

**PROCEDURE:**
Up to 2 pints in the prophylaxis and treatment of hypovolaemia associated with hemorrhage.
Up to 6 pints may be infused intermittently during the first 24 hours when hypovolaemia is due only to plasma loss as in burns.

**Dextraven**

A completely personal service

IN MANUFACTURE
HANGER of Roehampton, pre-eminent in the field of prosthetics, have been making artificial limbs for over 40 years and have been responsible for most of the outstanding advances in design during that time. Each Hanger limb is the result of painstaking, individual workmanship by craftsmen of varied skills, aided by modern manufacturing techniques and equipment.

IN FITTING
We have fitted well over 125,000 limbless and the vast experience thus gained ensures that every one of our limbs is a perfect fit. Literature and any special information, together with the address of the nearest centre at which HANGER “Service to the Limbless” can be obtained, will be gladly sent on request.

NON-ADHERENT

Wound dressing

A double-layer fabric constituting a dressing material which complies with all that can be required of a wound dressing; does not set up any kind of irritation in the wound; is permeable to air, and highly absorbent. The close, smooth weaving of the fabric prevents the granulations from growing into the dressing, as happens in the case of coarse-meshed fabrics such as gauze. The natural wound-healing process is not disturbed and the dressing can be removed easily and painlessly without damage to the wound.

Craftsmen made...

The success of an artificial limb lies in the fitting and manufacture of the socket. VESSA craftsmen have years of experience in this exacting work. Every VESSA artificial leg is designed solely to meet the individual amputee's requirements and infinite care and attention is given to the making of the socket, no standard 'formers' being used in its development, and, as the illustrations show, the socket is anatomically shaped, thereby ensuring the utmost comfort. VESSA are continually experimenting. Typical is the development of the VESSA metal suction socket, available for appropriate cases, which eliminates the need for the conventional pelvic band and swivel joint attachment. Every VESSA leg is backed by a comprehensive refit and repair service throughout the country. Literature for display in the consulting room, showing models designed for Above-knee, Below-knee, Through-hip, Syme's operation and for growing children will gladly be sent on request.

You the doctor
and the Clarks story

Clarks advertising is widespread—in the Press and on Television. Though it is not directed at the medical profession, you have probably seen it in the course of normal reading or viewing. Here we should like to tell you about the thinking which lies behind those advertisements.

Most doctors seem to agree that a large number of the foot ailments suffered by adults are the result of wearing badly fitting shoes in childhood. Clarks have long been concerned with this problem—in fact, we have built up our business in the sincere belief that something ought to be done about it. We have tried to make available well designed and well constructed shoes for growing children. We make these in a choice of widths and in half-sizes, and we try to see to it that they are sold through authorized stockists with fully trained fittings staffs. We feel so strongly about this that we actually train our stockists' staffs in the art of foot-fitting and in the use of the Clarks Foot-gauge. Every Clarks specialist has one of these.

This specialised shoe-fitting service is now available in almost every town and city throughout the United Kingdom.

Surgeon's Scalpel (Patent Pending)
with detachable blades

This improved Surgeon's Scalpel has one standard handle and a range of Three Blades of different contour. The design combines the strength, rigidity, and safety of the solid forged type with the adaptability and economy of Orthodox detachable patterns.
The entire blade edge is usable—it has no obstruction down its centre.
The patented fitment ensures that blades cannot pull off the handle when in use.
Each handle is supplied with a blade lifter making it safe and simple to remove the blade with forceps.

What one prominent surgeon says:—
"I found the Swann Surgeon’s Scalpel very satisfactory. The blade has a good edge and the whole knife is strong and stable and well suited for Orthopaedic work where the usual attachment comes adrift".

Consulting General Surgeon.

Supplies can be obtained from all surgical dealers.

ORTHOPAEDIC AND PLASTIC SURGERY

Under the General Editorship of CHARLES ROB, M.C., M.Chir., F.R.C.S., and RODNEY SMITH, M.S., F.R.C.S.

In two volumes: Vol. 1—Introductory, Trauma, Hand, Amputations, Plastic Surgery. Index to both volumes.

Vol. 2—Regional Orthopaedic Surgery. Index to both volumes.

£12 net per set, postage and packing 3s. 3d. extra.

Operative Surgery has now been divided into five specialist sections, of which the above will be of particular interest to plastic surgeons. Please write for brochure giving full details of this new arrangement.

SURGICAL PROGRESS 1958

Pp. ix : 441 - Index 98 illustrations. 52s. 6d. net, by post 2s. 9d. extra.

Surgical Progress 1958 is a volume presenting the essence of recent thought in surgical techniques and practice. It consists of original articles by acknowledged masters covering many important subjects. Each long critical survey is followed by a considerable number of abstracts from the relevant current world literature so that the author offers not only his considered assessment of his particular subject, but for comparison or confirmation, that of other workers in the same field—in effect the sum of latest thought.

A SYSTEM OF ORTHOPAEDICS AND FRACTURES

By A. GRAHAM APLEY, M.B., B.S., F.R.C.S.

This work states clearly and concisely the essentials of orthopaedic diagnosis and treatment. It will be valuable to those whose work demands a quick means of reference to orthopaedics—such as house surgeons and casualty officers—and all who are studying the subject. For those who want to add their own notes, there is an alternative edition interleaved with blank pages.

MODERN TRENDS IN SURGICAL MATERIALS

Edited by LEON GILLIS, M.B.E., M.Ch.(Orth.), F.R.C.S.(Eng.), F.R.C.S.(Edin.), D.L.O.

Pp. x : 270 - Index. 135 illustrations. 72s. 6d. net, by post 1s. 9d. extra.

This is a detailed examination of the modern usage of any materials used in the body, whether for sutures, artificial limbs, artificial joints or mesh for filling spaces. Plastics and metals are specially considered—the authors discussing from the medical point of view their manufacture and durability, how and when they may be used and the reactions of the body to them.

Security for your money, of course . . . the ability to make payments by cheque . . . advice when you need it . . . yes. But when you bank with the Westminster you become entitled to many more services than these. Did you know, for example, that the Westminster can make your money available to you almost anywhere in the world; that it will pay regularly-recurring items for you automatically; that it can obtain for its customers expert advice in matters of investment and foreign trade; that it will act as your Executor or Trustee. Your account at the Westminster Bank is the key to all these services—and that is a convincing reason why . . .

You should bank with the

WESTMINSTER

“A unique and most important study of the degenerative back and is most thought-provoking as well as intensely interesting. It will undoubtedly make some contribution towards finding the most effective treatment for a patient suffering from a pathological back. The reviewer warmly recommends it, particularly to neurosurgeons and orthopaedic surgeons.”

—PRACTITIONER

“Of the many works on spinal disorders few can be more comprehensive, painstaking or stimulating than this. His views will command wide respect in view of his great experience [over 2,000 laminectomies] . . . The section on the conservative and surgical treatment of back pain is particularly valuable.”

BEST QUALITY AND CRAFTSMANSHIP
SUGGESTIONS TO CONTRIBUTORS

The Journal of Bone and Joint Surgery is the official publication of orthopaedic surgeons of the Commonwealth of British Nations and the United States of America, and in this respect it represents the science and practice of orthopaedic surgery in the English-speaking world; but important contributions are also published from every country in the world and original articles are welcomed from any contributor wherever he may live. Facilities for translation are made available.

We also report the Proceedings of Colleges, Universities, Societies and Associations in every part of the world, thus contributing to international co-operation in the advance of orthopaedic surgery.

Manuscripts offered for publication in the British volume should be addressed to the Editor, Journal of Bone and Joint Surgery, 82 Portland Place, London. The Editorial Secretary of the Board is at the service of authors, and will assist in every way she can.

Manuscripts should be typewritten with double spacing and wide margins. The author should keep a carbon copy. The Editorial Board reserves the right to make literary corrections.

Radiographs should be submitted as reduced or contact prints. The original x-ray films from which prints have been made should always be sent in order that blocks can be made of the very best quality. Films will be returned as soon as possible.

Photographs, drawings and radiographic prints should be clearly marked on the back with the title of the paper and the author's name. Captions or legends of illustrations should be typed on a separate sheet at the end of the manuscript of the article itself. Captions should not be written only on the back of the prints. Each Figure should be referred to in the text.

References to medical literature should be recorded in the text with the name of the author and the year of publication in brackets. At the end of the article the list of references should be arranged alphabetically, each item including name of author, year of publication, title of article, Journal, number of volume, and page reference, thus:

The names of Journals should be given in full. The "World List" of abbreviations is not used. Every bibliography and list of references will be checked by the Editor, but much delay will be avoided if authors would be good enough to pay careful attention to accuracy.
