For the first time, the P.F.C.* Modular Total Knee System brings together clinically proven cruciate retaining and sacrificing designs with a common instrumentation system offering unprecedented benefits to surgeons and hospitals.

The Orthopaedic Surgeon has:
- a greater intraoperative choice with fewer components
- one instrumentation system for all cases (Primary, Revision and Salvage)
- an implant that can be customised easily in the theatre to treat unexpected circumstances

The Hospital has:
- less inventory to meet the diverse needs of different orthopaedic surgeons
- less need for expensive custom implants
- one instrumentation system for simplicity and ease of use by theatre staff.
